DETAILED ACTION

1. Claims 1-11 are pending and are examined.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Robertson et al. (14) or Chappell et al. (3). Robertson et al. discloses a method of assaying for the function of IRES elements by measuring translation of a second open reading frame from a dicistronic (bicistronic) mRNA in which the IRES element is located between the two cistrons. (Page 1168, column 1, fourth paragraph) Chappell et al. also discloses a method of using dicistronic mRNA analysis to determine a functional segment of an IRES of a cellular mRNA. (Fig. 1; page 1537, column 1, first paragraph) It would have been *prima facie* obvious for one of ordinary skill in the art at the time the invention was made to use teachings of either Robertson et al. or Chappell et al. to devise a method to identify an IRES element which method comprises providing a bicistronic expression system (Claim 1) wherein the expressed proteins are any type of marker proteins one of ordinary skill in the art wishes to choose. (Luciferase and CAT enzymes in Chappell et al.; fluorescent proteins in the instant application, Claim 2) Chappell et al. discloses IRES segments of approximately 40 nucleotides as those of instant application. (Claim 4)

Art Unit: 1648

The methods claimed in the instant application does not appear to be unique to be considered novel nor considered unobvious in view of the methods disclosed in Chappell et al. and Robertson et al., lacking any convincing evidence to the contrary.

4. No claim is allowed.

5. Papers relating to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 located in Crystal Mall 1. The Fax number for Art Unit 1648 is (703) 308-4242. All Group 1600 Fax machines will be available to receive transmissions 24 hrs/day, 7 days/wk. Please note that the faxing of such papers must conform with the Notice published in the Official Gazette, 1096 OG 30, (November 15, 1989).
